DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In Claim 1: On line 7, delete "said channel".

Allowable Subject Matter

Claims 1-5, 7-9 and 17-19 are allowed.

As to independent claims 1 and 17, no prior art has been found to show or suggest, in the claimed environment, a device or a method for providing a device including a housing comprising a plurality of chambers each including a first well, second well and channel region connecting the first and second well together in such a way that the first well, second well, and channel are formed as through-holes in the top member.

Applicant has argued persuasively that the previously cited Harrison, Jarnigan, Jeon and Springer references utilize channels and chambers that are formed *between* the top and bottom plate, and are thus not formed as through-holes in the top member. Klauke (US 20060003310) and Nikiforov (US 20020048768) also represent relevant prior art, but both of these references also merely disclose channels that are formed *between* the top and bottom plate.

The prior art does not disclose a device for monitoring leukocyte migration that includes a housing comprising a plurality of chambers that each include a first well, a second well, and a channel region between the two wells formed as a through-hole in the top member.

Double Patenting

Provisional Obviousness-type Double Patenting rejections over copending U.S. Serial No. 10/688,905 set forth in the previous Office Actions have been withdrawn. The instant application and this copending application were filed on the same date (10/21/03), and the copending application represents the "improvement" because its independent claim contains additional limitations regarding the formation of a dynamic solution concentration gradient along a longitudinal axis. Accordingly, the double patenting rejections over U.S. Serial No. 10/688,905 are withdrawn in accordance with MPEP 1490.
